Sinoma Jiangxi Insulator and Electricity Co., Ltd.

Introduction of New Hybrid Insulators

Taking advantage of our strong R&D platform, Sinoma Jiangxi Insulator and Electricity Co., Ltd has been committing to the research and innovation of new hybrid insulators. We have achieved breakthroughs in key technologies, and have applied for four Patents of Invention and two Utility Model Patents.

Owning the dual advantages of both porcelain and silicone rubber composite coating, the new porcelain-composite hybrid insulators have such outstanding features as high bending strength, good seismic resistance, high rigidity, small deformation, strong anti-pollution performance, reliable insulation capability, light weight, etc., so acting as key insulation parts in Ultra High Voltage and Extra High Voltage Power Transmission and Transformation Projects.

新型瓷芯复合绝缘子介绍

中材江西电瓷电气有限公司依托自身强大的科研平台，积极开展新型复合绝缘子的研究创新，取得了关键技术的突破，已申请4项发明专利、2项实用新型专利。

新型瓷芯复合绝缘子具有瓷和硅橡胶复合外套的双重优点，抗弯抗震性能好、刚度高、变形量小、耐污能力强、绝缘性能可靠、重量较轻等显著特点，用作超高压、特高压输变电工程中的关键绝缘器件。

Introduction 介绍

New hybrid insulators are of light weight and high strength, and the Al_2O_3 content is high in the formula, so the internal structure of the porcelain body is uniform and dense.

Porcelain core is assembled by porcelain body, flange and cement. Glazed porcelain core is non-puncture type, and it is the main part for sustaining mechanical load; high-temperature silicone rubber sheath and sheds are main parts for outer insulation, with excellent hydrophobic performance and excellent hydrophobicity transference performance, strong anti-pollution capabilities, anti-corona and electric tracking proof performances as well.

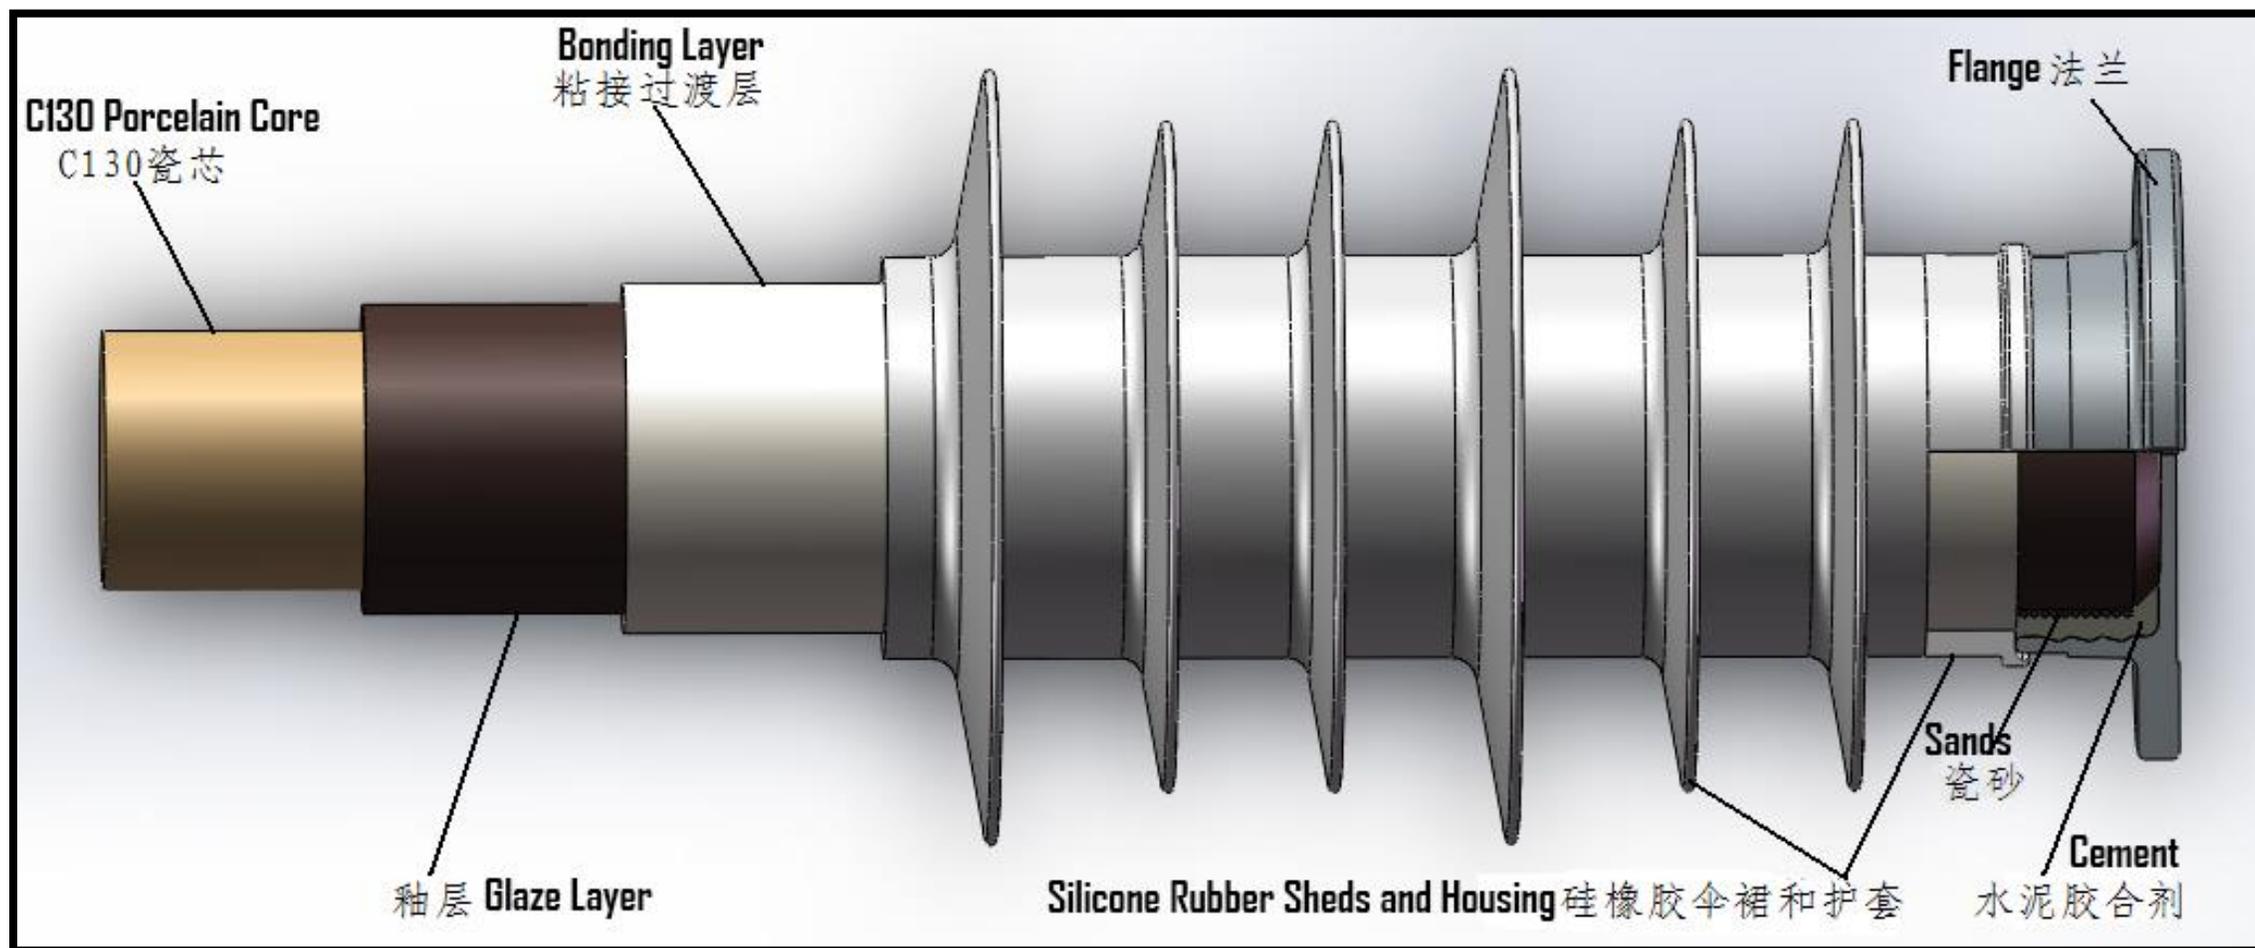

Through advanced interface processing technology, porcelain core and high temperature silicone rubber achieve mechanical nesting and chemical bonding, and the firm combination plays an important role in the insulator quality and reliability.

新型瓷复合绝缘子轻型高强，配方 Al_2O_3 含量高，瓷体内部结构均匀、致密。

瓷芯是由瓷件、法兰借助水泥胶合剂胶装而成，有釉瓷芯属于不可击穿型结构，它是绝缘子承受机械负荷的主要零件，高温硫化硅橡胶护套和伞裙是外绝缘的主要零件，憎水性能优异、憎水迁移性优良，耐污能力强，抗电晕和电痕。

通过先进的界面处理技术，瓷芯和高温硅橡胶实现机械嵌套和化学键结合，粘接牢固，对绝缘子的质量和可靠性起着重要的作用。

Product Main Advantages 产品主要优势

1. Advanced interface processing techniques of ceramic and silicone rubber, with strong binding.

陶瓷和硅橡胶界面的先进处理技术，粘接牢固

2. Ceramic has good high-temperature resistance capability, thus the high temperature vulcanization process does not affect ceramic strength.

陶瓷耐高温能力好，高温硫化的过程不影响陶瓷强度。

3. Silicone rubber shed and sheath have excellent Hydrophobic Nature (HC1 Level), and good aging resistance capability.

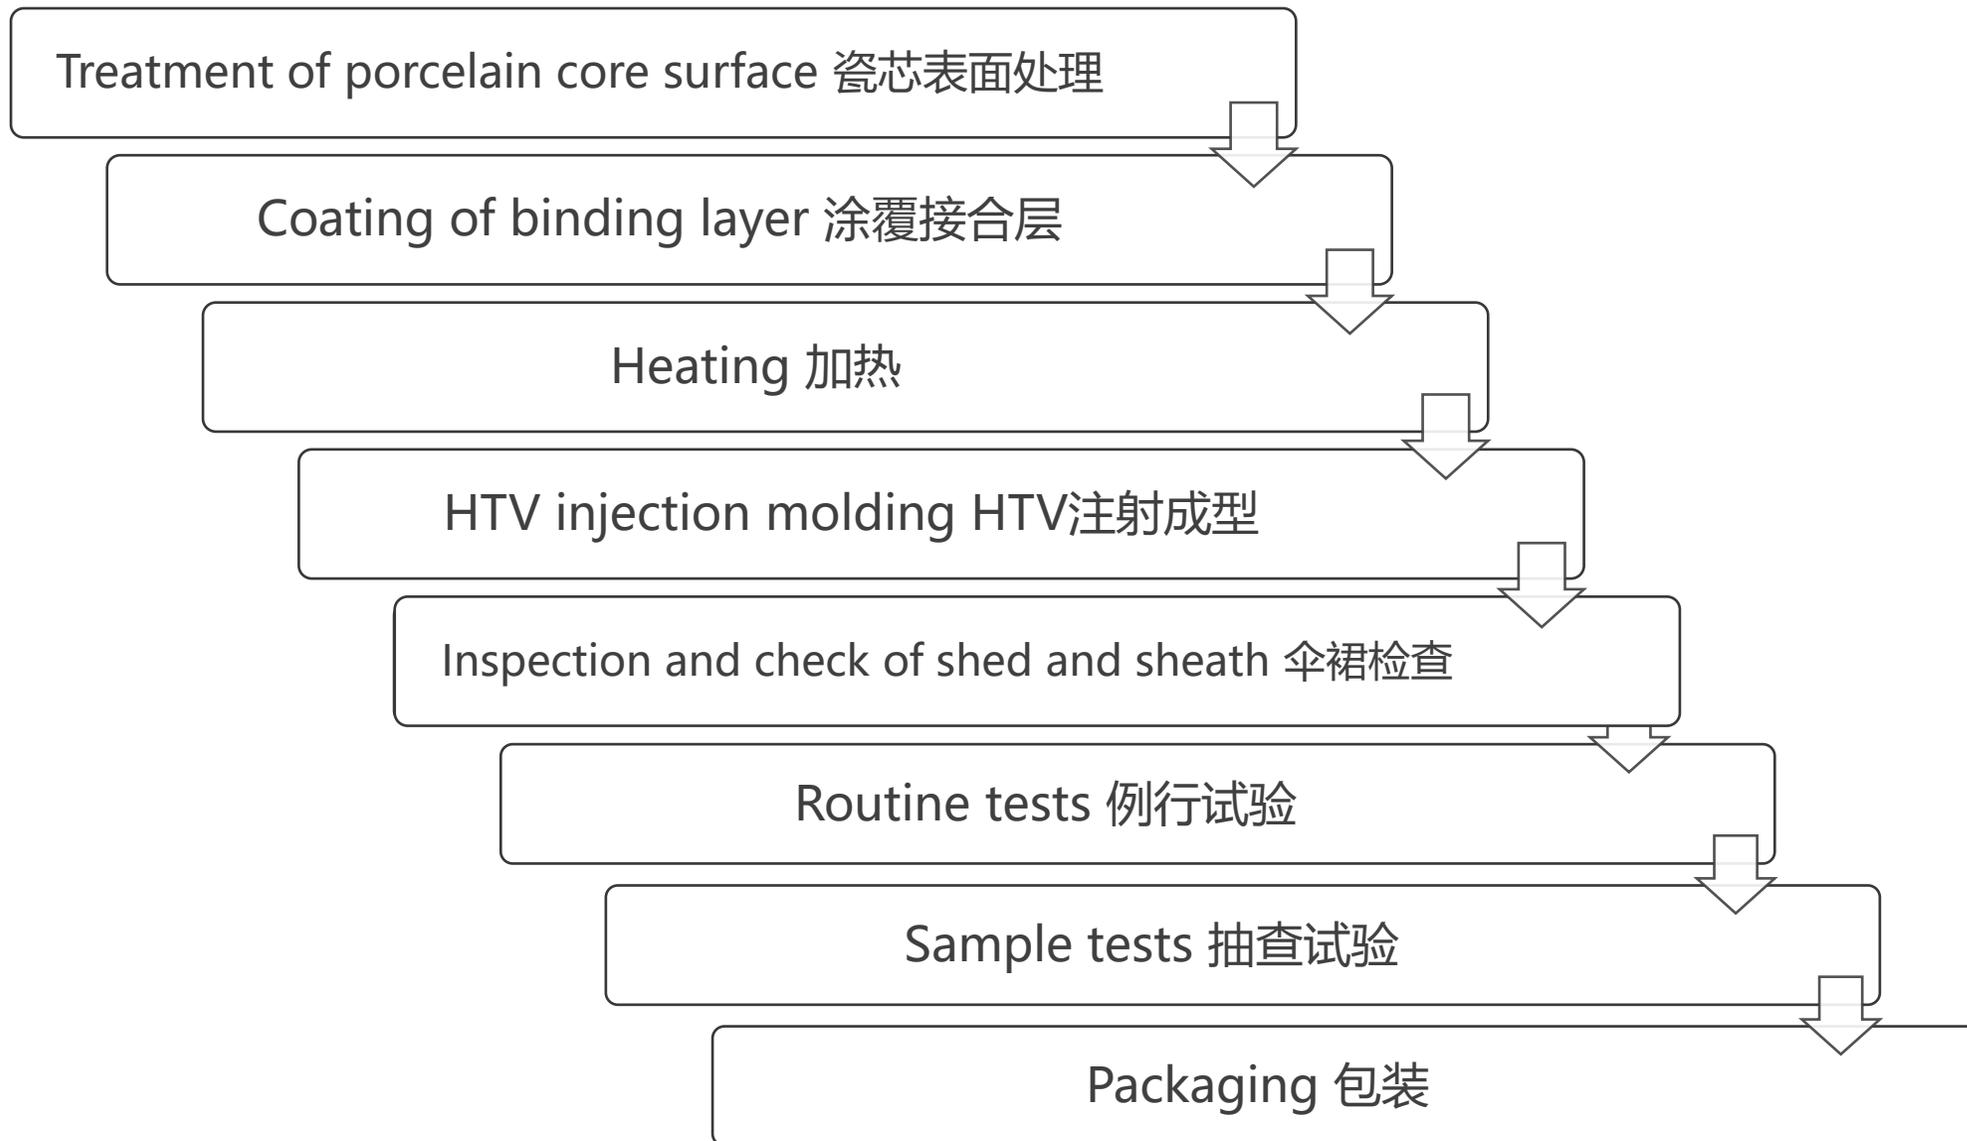

伞裙和护套憎水性优异(HC1级)，耐老化性能好。

4. The modulus of porcelain core is as high as 110Gpa, which is 7-10 times that of the winding FRP.

瓷芯模量高达110Gpa，是缠绕玻璃钢的7~10倍。

Main Processes 主要流程

Assembling and Sealing 胶装和封装

Porcelain core can be produced by both Isostatic dry method and wet process, mainly determined by the core diameter and insulator height.

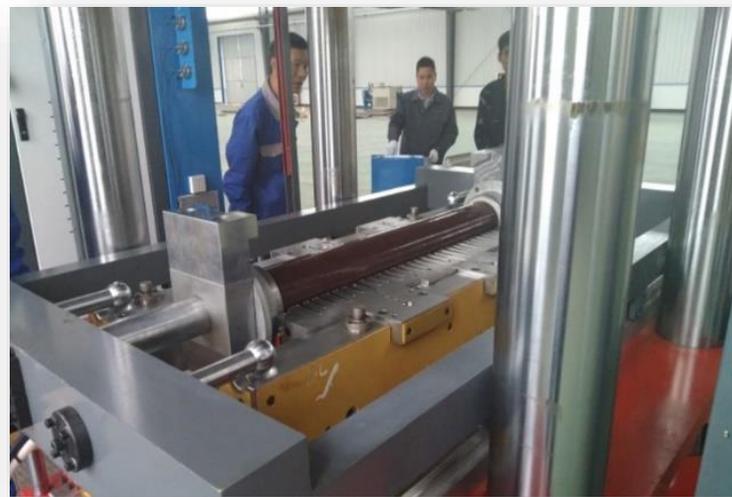

瓷芯根据直径和高度可选择湿法或干法等静压生产。

After trimming, drying, glazing, firing, etc., porcelain cores undertake assembling and curing.

经过修坯、烘干、上釉、烧成后，瓷芯进行胶装和养护。

Sealing 封装

We use high temperature high pressure silicone injection molding technology. And there are two methods of sealing. **We have tested results of the two methods, and they both work well.**

我司采用高温高压注射技术，封装可采取两种方式。我们试验过两种方法，都很有效。

1. The metal sealing ring is applied to the flange via turning, and the silicone rubber wraps integrally, and adheres directly to the fitting, without the need for artificial/manual sealing.

法兰上车削出密封槽，注射硅橡胶时包覆法兰，整体密封，无需人工粘接。

2. The other one is artificial sealing by using RTV between fittings and silicone rubber.

法兰和硅橡胶之间通过涂抹RTV密封胶，人工粘接。

Moreover, unlike fiberglass materials, glazed porcelain products are inorganic materials, which will not be corroded by water penetration.

此外，与玻璃钢材料不同，上釉瓷芯作为无机材料，不会被水汽腐蚀。
